SUMMARY

Computer Science undergraduate (B.Tech) with hands-on experience designing, building, and deploying full-stack software systems end-to-end — from backend API design and data processing pipelines to CI-based deployment. Comfortable working across the stack in Python and JavaScript, with practical exposure to FastAPI design, caching for performance, and multi-service architecture (separately deployed backend/frontend communicating over a CORS-enabled API). Strong analytical and problem-solving mindset from applied data science and ML coursework/projects. Quick learner, clear communicator, and effective collaborator in fast-paced, remote/agile teams — looking to bring this foundation to a Systems Development Engineer internship building mission-critical, large-scale software.

SKILLS

Programming & CS Fundamentals: Python, JavaScript, Object-Oriented Programming, Data Structures & Algorithms basics, FastAPI Design, Problem-Solving & Complexity Analysis (applied through coursework and projects)

Software & Systems: FastAPI (backend services), Caching strategies, CORS-enabled multi-service architecture, Git version control, CI-based auto-deploy, Environment/Secrets management, Render & Vercel deployment

Data Science & ML: Pandas, NumPy, Scikit-learn, Exploratory Data Analysis (EDA), Feature Engineering, Feature Scaling, Data Cleaning & Preprocessing, Model Evaluation, Machine Learning

AI / LLMs: Prompt Engineering, Retrieval-Augmented Generation (RAG), Generative AI / LLMs, schema-constrained LLM extraction, Agentic AI

Web Development: HTML, CSS, JavaScript, responsive & accessible UI

Core Competencies: Analytical Thinking, Communication, Public Speaking, Collaboration, Problem-Solving, Adapting Quickly in Agile/Fast-Paced Environments

EXPERIENCE

Web Developer Intern — 1Stop.ai

Sep 2025 – Nov 2025

- Built responsive, cross-device web applications using HTML, CSS, and JavaScript, strengthening practical front-end engineering and debugging skills.
- Collaborated with designers and engineers to implement UI/UX improvements while maintaining accessibility standards, working within a fast-paced, remote agile workflow.
- Debugged and resolved code issues to maintain website functionality and reliability, developing a habit of methodical, test-driven troubleshooting.

Data Analyst Intern — Brainwork TechnoSolutions Pvt. Ltd.

June 2026 – July 2026

- Worked as a Data Analyst on data analysis projects, applying exploratory data analysis, feature engineering, and predictive modeling techniques.
- Consistently delivered assigned work on time, demonstrating an inquisitive, analytical, and self-motivated approach in a fast-paced environment.

AI & Public Speaking Intern — Teachwell Professional Studies Institute Pvt. Ltd.

- Completed a project-based internship combining AI concepts with public speaking skill-building, delivering a real-world project applying both — strengthening technical communication and articulation of problem-solving approaches.

PROJECTS

AI-Powered Portfolio Chatbot — Python, FastAPI, Groq LLM API, JavaScript

Live: raunak-ai-portfolio.vercel.app

- Designed and built a full-stack, multi-service web application: a FastAPI backend and a decoupled vanilla JavaScript/HTML/CSS frontend, deployed as two independent services (Render + Vercel) communicating via a CORS-enabled REST API — hands-on practice with distributed, multi-tiered system design.
- Engineered a backend pipeline that parses resume PDFs into structured data (via pypdf and a schema-constrained LLM call), then serves free-form Q&A grounded strictly in that structured context to prevent hallucination.
- Implemented a caching layer to parse the resume once per server instance instead of per request — an optimization that cut redundant LLM calls and reduced response latency.
- Owned the full delivery pipeline end-to-end: environment variable/secrets handling, Git version control, and CI-based auto-deploys from GitHub, mirroring real-world software delivery and support workflows.

Mental Health Score Predictor — Python, FastAPI, Pydantic

Live: mental-health-predictor-1-c3kk.onrender.com

- Built a full-stack web application to predict mental health scores, pairing a vanilla HTML/CSS/JavaScript frontend with a FastAPI backend using Pydantic for schema validation and a CORS-enabled API, deployed on Render.
- Performed EDA, feature engineering, and data cleaning/preprocessing, then applied and evaluated ML algorithms to build and tune the predictive model.
- Built data pipelines to prevent data leakage during preprocessing and training, ensuring the model's performance generalized reliably to unseen data.

EDUCATION

Qualification	Institution	Year
B.Tech, Computer Science	Dr. A.P.J. Abdul Kalam Technical University — Greater Noida, Uttar Pradesh	2024 – 2028
12th — CBSE	MM Public School	2024
10th — CBSE	MM Public School	2022

CERTIFICATIONS

- QuizOff 2026: India's Biggest AI Quiz — Participation Certificate, CampusCrew (hosted on Unstop), July 2026
- Oracle Certified Foundations Associate — Agentic AI, Oracle University, September 2026
