SUMMARY

Aspiring Data Scientist / ML professional with hands-on internship experience in exploratory data analysis, feature engineering, and model evaluation using Python and scikit-learn. Strong analytical mindset with a track record of quick learning and effective collaboration in remote, fast-paced environments. Seeking to apply data-driven problem-solving to real-world business challenges.

TECHNICAL SKILLS

- Languages & Libraries: Python, Pandas, NumPy, Scikit-learn
- Data Science: Exploratory Data Analysis (EDA), Feature Engineering, Feature Scaling, Data Cleaning & Preprocessing, Model Evaluation, Machine Learning
- Web Development: HTML, CSS, JavaScript
- Core Competencies: Analytical Thinking, Communication, Collaboration, Problem-Solving

EXPERIENCE

Data Science Intern — DecodeLabs (Remote)

[July 2026] – [Aug. 2026]

- Conducted exploratory data analysis (EDA) to identify trends, patterns, and data quality issues across project datasets.
- Performed feature extraction and feature engineering to improve model input quality for downstream analysis.
- Cleaned and preprocessed raw datasets, including handling missing values and standardizing formats for consistency.
- Evaluated model performance using established metrics to support data-driven decision-making.

Web Developer Intern — 1Stop

[Sep. 2025] – [Nov. 2025]

- Built responsive web applications using HTML, CSS, and JavaScript to improve user experience across devices.
- Collaborated with designers to implement UI/UX improvements while maintaining accessibility standards.
- Debugged and troubleshooted code issues to maintain website functionality and reliability.

PROJECTS

AI-Powered Portfolio Chatbot | Python, FastAPI, Groq LLM API, JavaScript

- Built a full-stack web app where an LLM answers recruiter questions about my background, grounded strictly in my résumé to prevent hallucination.
- Designed a FastAPI backend that parses résumé PDFs into structured data (via pypdf and a schema-constrained LLM call), then answers free-form questions using that structured context.
- Implemented a caching layer so the résumé is parsed once per server instance rather than on every request, cutting redundant LLM calls and latency.
- Built a vanilla JavaScript/HTML/CSS frontend with no framework dependency, and deployed the system as two independent services (backend on Render, frontend on Vercel) connected via a CORS-enabled REST API.
- Managed the full deployment pipeline: environment variable/secrets handling, Git version control, and CI-based auto-deploys from GitHub.

EDUCATION

B.Tech, Computer Science

Dr. A.P.J. Abdul Kalam Technical University — Greater Noida, Uttar Pradesh | [Graduation Month Year]

CERTIFICATIONS

- QuizOff 2026: India's Biggest AI Quiz — Participation Certificate, CampusCrew (hosted on Unstop), July 2026
